

3MM & 5MM MILITARY GRADE KEVLAR® GLOVES

Kevlar® Superstretch Gloves combine the comfort and dexterity of super-stretch neoprene with the added strength, protection and durability of Kevlar® reinforcement on the palms and fingertips — without compromising hand movement.

Manufactured from 4-way super-stretch neoprene, these gloves provide excellent flexibility, comfort and dexterity. The Ti-Ax™ Thermacote® lining helps retain heat, while DuPont™ Kevlar® enhances strength and protection. Polymer-coated or Aquasure seams improve durability, with glass-fibre reinforced finger pads providing additional grip and protection. The 2mm and 3mm thickness options provide the ultimate dive glove combination of flexibility and luxurious comfort, with ultra hard-wearing Kevlar® protection, these gloves are perfect for warm waters if you're wreck or cave diving.

Our 5mm thick gloves are designed for more extreme diving conditions or colder waters. They're ideal when additional thermal protection is required. The resulting design makes our 5mm Kevlar® Superstretch Gloves the ultimate hard-wearing Neoprene commercial diving glove.

Please note: style may vary depending on size. One style has aquasuring around the finger seams while the other has a polymer coating, both offer long-life durability.

KEY FEATURES

- 4-Way Super-Stretch Neoprene
- Kevlar® Palm & Fingertip Protection
- Ti-Ax™ Thermacote® Heat-Reflective Lining
