

232 BAR FABER STEEL CYLINDERS

Cylinder Sizes

Faber Cylinders are manufactured in a number of shapes and sizes to suit your needs. We stock limited sizes so if you are looking for a specific size please contact us and we would be happy to discuss your requirements. Dive tank sizes available include 3L, 7L, 10L, 12.2L (Tall), 12.5L (Dumpy) and 15L sizes. 300 bar faber cylinders are also available.

The Steel

Faber are known worldwide for their specialisation in lightweight, steel tank manufacturing and for that reason manufacture tanks for brands across the globe. They're lightweight, tough and high quality.

Tough and Light

While aluminium is a lighter material, steel is considerably stronger. That means that an aluminium tank would have a wall thickness twice that of steel making it both larger and heavier. Faber's steel tanks are both light and robust.

Tank Boots

Most Faber cylinders are supplied with a self-draining flexible rubber cylinder, this protects the bottom of your cylinder and ensure they stay upright when in storage. Boots, Tank Handles and Protective Mesh are also available to buy separate.

Servicing Cylinders

We are able to fill and service your cylinders in-house.

Shipping Cylinders

Diving cylinders can only be shipped empty. Due to shipping regulations diving cylinders and valves are shipped in separate packages. If you purchase multiple cylinders each cylinder will be packaged separate and valves will be packaged together.

If you are collecting your cylinder in-store, the valve will be fitted for you and we will include a FREE Air Fill.

We proudly supply to the UK MoD

NSN 4220-99-850-2582 (15L)
NSN 8120-99-256-7200 (12L)
NSN 8120-99-844-5031 (7L)
NSN 8120-99-902-4568 (3L)

Why Faber's Steel Cylinders are the best

Faber Steel vs Aluminium Cylinders

- 1 weigh the same if not less
- 2 have superior buoyancy performance
- 3 are not affected by SLC
- 4 will last forever with proper maintenance

Faber Steel vs other steel cylinders

- 1 are the lightest on the market
- 2 have a novel design which ensures a uniform weight distribution
- 3 have a unique coating against corrosion
