

# FREESTYLE WATER RESCUE SAFETY BOOTS V2

Northern Diver's Freestyle Safety Boots are manufactured using both synthetic and natural materials, which conform to the relevant sections of EN ISO 20345:2011, for the performance and quality of safety boots.

Incorporating lightweight, protected toe-caps and protected cloth mid-soles, Northern Diver Freestyle Safety Boots provide comfort, control and protection. They allow your rescue professionals to feel confident to perform their tasks on dry land, in water or in a combination of both environments

In fact, our Freestyle safety boots conform to category S3 SRC of the European standard EN ISO 20345: 2011 in accordance with Article 10 of the Personal Protective Equipment Directive (89/686/EEC).

The S3 slip resistance requirements meaning they've been tested for forward slips on the heel and flat surfaces on steel floors with glycerol and ceramic tile floors with SLS. On both they've been highly friction coefficient. This slip resistance comes from their high quality rubber EVA non-slip sole and composite toe. In terms of rescues, this enables exceptional grip on wet or unstable surfaces, moss, seaweed and many other hazardous surfaces.

Their Class I, S3 status for EN ISO 20345: 2011 safety footwear means your team will benefit from boots that are penetration resistant and have a cleated sole. In addition to this, they conform to the SB, S1 and S2 requirements. That means our Freestyle Safety boots are impact resistant to 200 joules, are antistatic and have water absorption and water penetration properties as well as energy absorption around the heel.

Our Freestyle Safety Boots incorporate strengthened stitch seams for long term durability, they're abrasion resistant and have external heel protection. Their wickered inner lining and the drain holes on the inner side draw away any dampness that may occur during use. The neoprene insoles provide extra comfort while the two Velcro closing straps and the quick release closure system make our Freestyle Safety boots secure but easy to take off at speed if needed.

Northern Diver Freestyle Safety Boots perform at their best when used in conjunction with latex or neoprene drysuit socks, wetsuit socks or as part of the complete Northern Diver Specialist Rescue System.

Available sizes : UK 5 - UK 14, "over sized"
